

SITUATION

SKC Communications worked with Corning Optical to update their executive boardroom system to accommodate multiple infrastructures. Their primary need in the board room was collaboration to view, edit and annotate Windows Office applications and proprietary production management applications. They needed an easy to use, flexible and robust system to hold audio, web and sporadic video conferencing.

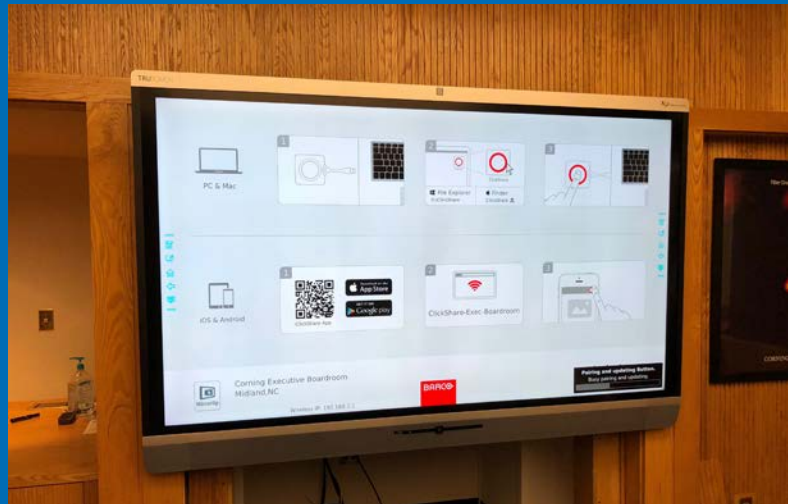

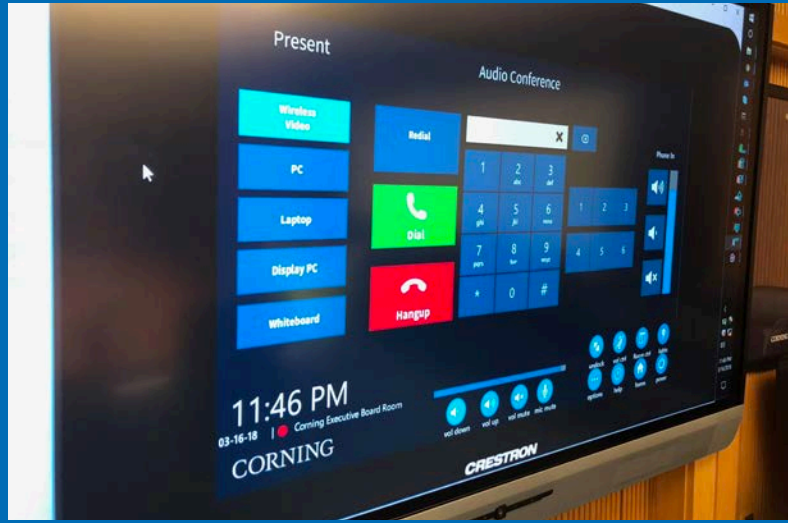

SOLUTION

SKC Communications designed, built, and managed the project. The proposed solution was the Newline X9 interactive touch. This display would do the bulk of the heavy lifting allowing the Corning Executives to use the multi-touch display to annotate and edit content.

RESULTS

SKC worked through the project to provide Corning with the executive board room they were needing. The video is provided by the dual camera solution located on the Newline X9 board. All audio, web and video conferencing were integrated into a DSP for seamless quality sound. A Crestron control makes the room intuitive and easy to use.

TECHNOLOGIES USED

- Barco
- Belden
- Biamp
- Crestron
- Extron
- Newline
- Shure
