

SITUATION & SOLUTION

Hallstar was looking for a new AV partner to provide video and audio conferencing for all the rooms in their new office in Darien, Illinois. SKC's expert design team worked to create rooms and spaces that work with Microsoft Teams and Zoom.

RESULTS

Rooms have Samsung or Newline Interactive displays and Crestron conferencing systems with a Huddly IQ camera. Audio processing and microphones are powered by Biamp technology. Other technologies used were QSC and Poly. The medium-size conference room also features a Legrand movable cart that allows easy movement of the display. The mobile cart gives users the ability to access and use the display in the medium room or move it to the larger town hall space.

The customer currently has SKC Elite Service, which includes annual preventative maintenance, 24-hour priority technician dispatch, and many more great services and benefits.
